MASTER OF ENGINEERING STUDENT

I am a Master of Engineering (M. Eng) student in the AIMS program at Hochschule Coburg, with a strong foundation in technical and electrical skills. Seeking a mandatory internship opportunity to apply my academic knowledge and skills in a practical, real-world setting.

EDUCATION

Master of Engineering - Analytical Instruments, Measurement and Sensor Technology (AIMS) **Oct 2025 - Aug 2027**
Hochschule Coburg, Germany
Relevant Modules: Computer Based Measurement and Control, Medical Imaging, Sensor Technology, Quality Management

Master of Engineering - AIMS Exchange Semester **Mar 2026 - Jul 2026**
University of Shanghai for Science and Technology, China
Relevant Modules: Automotive Electronics, Machine Learning, Photoelectic Imaging and Processing, Semiconductor Devices and Physics

Bachelor of Technology - Computer Science **Jul 2018 - Jun 2022**
Jaypee Institute of Information Technology, India

PROFESSIONAL EXPERIENCE

Assistant Manager (Maintenance Dept.) | Medical Products Service, New Delhi **Mar 2025 - Sep 2025**
I supervised and led all maintenance operations, including regular facility inspections to identify and address issues. I planned and managed repair and installation activities while ensuring the maintenance staff's adherence to safety policies. My responsibilities also included assigning repair schedules, evaluating cost estimates, documenting progress through daily reports and maintenance logs, overseeing equipment inventory, and placing orders for necessary supplies.

Linux System Administrator | KV IT- Solutions, New Delhi **July 2022 - Dec 2024**
The responsibilities included setting up and managing user and group accounts, as well as configuring permissions, firewalls, and directory services. I had to install, configure, and maintain web and file servers, and wrote automation scripts using Bash and Python. I collaborated with the development team to deploy and configure web applications on Apache and Nginx servers. Additionally, I provided technical support to end-users, resolving Linux-related issues to ensure smooth system operations.

PROJECTS

Exudate Segmentation in Retinal Fundus Images **Jun 2026**
Developed a machine learning model for Exudate Segmentation in Fundus Images, aimed at automating the detection of exudates in retinal scans. The project utilized deep learning techniques, including CNNs, to achieve high accuracy in identifying and segmenting exudates, crucial for diabetic retinopathy diagnosis.

Autonomous Maze Navigation Robot **Jan 2026**
Designed and implemented an Arduino-based autonomous robot capable of navigating through a maze using ultrasonic and IR sensors for obstacle detection and pathfinding. The system integrated sensor data to dynamically adjust the robot's movement, enabling efficient maze traversal.

KEY COMPETENCIES

Python
C++
MATLAB
Simulink
Fusion 360 (learning)

LANGUAGES

English - C1
German - A2

VOLUNTEER EXPERIENCE

Rescued dogs and provided them with food and shelter in association with Cannie Foster Home (NGO).
